

DOMAINS *of* DEVELOPMENT

The Domains of Development are a framework for what your children should know and should be able to do at certain points of their life.

As your children grow, they'll reach milestones associated with each of these domains.

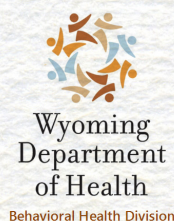

Make sure your child is on track and meeting their developmental milestones.

The more you *know*,
the better they
grow.

We love this age; it's fascinating to watch kids learn and get to know the world around them, and to see them grow (and grow and grow)!

----- ★ -----
-DID YOU KNOW-
90% of a child's brain develops before their fifth birthday?

That's why it's essential for every child ages 0-5 to receive developmental screening.

Because the more you know, the better they grow.

Getting your child screened is easy – screening centers are nearby and *free* across the state of Wyoming.

A team of friendly, qualified and trained staff will work closely with you and your family to check in on your child's development. They'll make sure your child is on track to meeting all of their developmental milestones, and keep you informed through every step of the process.

It's best to have your child's first screening while they are an infant, and a second screening before they turn five.

If it's determined that your child is eligible for additional services that can help to keep them on track, your team will guide you through the next steps: recommendations, referrals and a plan created specifically for your family, and support along the way.

We're here for you and we're here for your family. Our goal is to help you set your child up for a successful life, starting at the very beginning.

Screenings are essential for every child ages 0-5 because they enhance children's learning and development.

This prepares them for preschool, for kindergarten, and to take on the world!
